Multidimensional Poverty Measurement and Analysis

Sabina Alkire, James Foster, Suman Seth, Maria
Emma Santos, Jose Manuel Roche, and Paola Ballon

Comprehensive survey of methods used for
measuring multidimensional poverty

Illustrates state-of-the-art of quantitative
techniques used in multidimensional poverty
studies

A unique guide to viewing poverty through a multi-
dimensional lens

Background

Motivation:

- **Normative: Capability** Sen, A. K. (1992). *Inequality Re-examined*. Oxford: Oxford University Press.
- **Empirical: Mis-match**
- Stewart, F., Saith, R., and Harriss-White, B. (2007). *Defining Poverty in Developing Countries*. Basingstoke: Palgrave Macmillan.
- Bourguignon, F., Bénassy-Quéré, A., Dercon, S., Estache, A., Gunning, J.W., Kanbur, R., Klasen, S., Maxwell, S., Platteau, J-P., and A. Spadaro (2010) 'Millennium Development Goals: An Assessment', in R. Kanbur and M. Spencer (eds.), *Equity and Growth in a Globalizing World*. World Bank, ch. 2.
- **Policy:** Atkinson, A. B. (2003). 'Multidimensional Deprivation: Contrasting Social Welfare and Counting Approaches', *Journal of Economic Inequality*, 1(1):51-65.

Methods:

- **Dashboard:** Ravallion, M. (2011b). ‘On Multidimensional Indices of Poverty’, *Journal of Economic Inequality*, 9(2): 235–48.
- **Composite:** Nardo, M., Saisana, M., Saltelli, A., Tarantola, S., Hoffman, A., and Giovannini, E. (2008). *Handbook on Constructing Composite Indicators: Methodology and User Guide*. Ispra, Italy: OECD.

Methods:

- **Dominance:** Duclos, J. Y., Sahn, D. E., and Younger, S. D. (2006a). ‘Robust Multidimensional Poverty Comparisons’, *The Economic Journal*, 116(514): 943–68.
- **Statistical:** Asselin, L. M. (2009). *Analysis of Multidimensional Poverty: Theory and Case Studies*. Dordrecht: Springer.
- **Fuzzy:** Lemmi, A. and Betti, G. (2006). *Fuzzy Set Approach to Multidimensional Poverty Measurement*. New York: Springer.
- **Axiomatic:** Bourguignon, F. and Chakravarty, S. R. (2003). ‘The Measurement of Multidimensional Poverty’, *Journal of Economic Inequality*, 1(1): 25–49.
- **Counting:** Nolan, B. and Whelan, C. (2011). *Poverty and Deprivation in Europe*. Oxford: Oxford University Press.

Moving Forward: Axiomatic & Counting

- **Identification:** Sen, A. K. (1976). 'Poverty: An Ordinal Approach to Measurement', *Econometrica*, 44(2): 219–31.
- **Decomposability:** Foster, J. E., Greer, J., and Thorbecke, E. (1984). 'A Class of Decomposable Poverty Measures', *Econometrica*, 52(3): 761–6.
- **Functionings & Counting:** Brandolini, A., D'Alessio, G., 1998. Measuring Well-being in the Functioning Space. Mimeo. Rome. Banco d'Italia Research Department.

The Alkire-Foster Methodology

Multidimensional Data

Matrix of well-being scores for n persons in d dimensions

$$X = \begin{matrix} & \text{Dimensions} \\ \begin{matrix} \text{Persons} \\ \begin{matrix} 1 \\ 2 \\ 3 \\ 4 \end{matrix} \end{matrix} & \begin{bmatrix} 13.1 & 14 & 4 & 1 \\ 15.2 & 7 & 5 & 0 \\ 12.5 & 10 & 1 & 0 \\ 20 & 11 & 3 & 1 \end{bmatrix} \end{matrix}$$

$$z = (13 \quad 12 \quad 3 \quad 1) \quad \text{Cutoffs}$$

Multidimensional Data

Replace entries: 1 if deprived, 0 if not deprived

$$\begin{array}{c} \text{Dimensions} \\ X = \begin{bmatrix} 13.1 & 14 & 4 & 1 \\ 15.2 & \underline{7} & 5 & \underline{0} \\ \underline{12.5} & \underline{10} & \underline{1} & \underline{0} \\ 20 & \underline{11} & 3 & 1 \end{bmatrix} \quad \text{Persons} \\ z = (13 \quad 12 \quad 3 \quad 1) \quad \text{Cutoffs} \end{array}$$

These entries fall below cutoffs

Deprivation Matrix

Replace entries: 1 if deprived, 0 if not deprived

$$g^0 = \begin{matrix} & \begin{matrix} \text{Dimensions} \\ \begin{bmatrix} 0 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1 \\ 1 & 1 & 1 & 1 \\ 0 & 1 & 0 & 0 \end{bmatrix} \end{matrix} \\ \text{Persons} \end{matrix}$$

Identification – Weights

Deprivation Matrix

Dimensions

$$g^0 = \begin{bmatrix} 0 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1 \\ 1 & 1 & 1 & 1 \\ 0 & 1 & 0 & 0 \end{bmatrix}$$

$$w = [w_1 \quad w_2 \quad w_3 \quad w_4]$$

Weighted Deprivation Matrix

Dimensions

$$g^1_0 = \begin{bmatrix} 0 & 0 & 0 & 0 \\ 0 & w_2 & 0 & w_4 \\ w_1 & w_2 & w_3 & w_4 \\ 0 & w_2 & 0 & 0 \end{bmatrix}$$

Identification – Counting Deprivations

Assuming **equal weights** and $\sum_{j=1}^d w_j = d$

	Dimensions	c	
$\delta _0 =$	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0	Persons
	$\begin{bmatrix} 0 & 1 & 0 & 1 \end{bmatrix}$	2	
	$\begin{bmatrix} 1 & 1 & 1 & 1 \end{bmatrix}$	4	
	$\begin{bmatrix} 0 & 1 & 0 & 0 \end{bmatrix}$	1	

Identification

Q/ Who is poor?

$$\alpha_0 = \begin{array}{cc} \text{Dimensions} & c \\ \begin{bmatrix} 0 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1 \\ 1 & 1 & 1 & 1 \\ 0 & 1 & 0 & 0 \end{bmatrix} & \begin{matrix} 0 \\ 2 \\ 4 \\ 1 \end{matrix} \end{array} \quad \text{Persons}$$

Identification – Union Approach

Q/ Who is poor?

A1/ Poor if deprived in any dimension $c_i \geq 1$

	Dimensions	c	
$\delta^0 =$	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0	Persons
	$\begin{bmatrix} 0 & 1 & 0 & 1 \end{bmatrix}$	2	
	$\begin{bmatrix} 1 & 1 & 1 & 1 \end{bmatrix}$	4	
	$\begin{bmatrix} 0 & 1 & 0 & 0 \end{bmatrix}$	1	

Identification – Union Approach

Q/ Who is poor?

A1/ Poor if deprived in any dimension $c_i \geq 1$

	Dimensions	c	
$g_1^0 =$	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0	Persons
	$\begin{bmatrix} 0 & 1 & 0 & 1 \end{bmatrix}$	<u>2</u>	
	$\begin{bmatrix} 1 & 1 & 1 & 1 \end{bmatrix}$	<u>4</u>	
	$\begin{bmatrix} 0 & 1 & 0 & 0 \end{bmatrix}$	<u>1</u>	

Observations

Union approach often predicts very high numbers.

Charavarty et al '98, Tsui '02, Bourguignon & Chakravarty
2003 etc use the union approach

Identification – Intersection Approach

Q/ Who is poor?

A2/ Poor if deprived in all dimensions $c_i = d$

	Dimensions	c	
$\delta_{\text{A2}}^0 =$	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0	Persons
	$\begin{bmatrix} 0 & 1 & 0 & 1 \end{bmatrix}$	2	
	$\begin{bmatrix} 1 & 1 & 1 & 1 \end{bmatrix}$	4	
	$\begin{bmatrix} 0 & 1 & 0 & 0 \end{bmatrix}$	1	

Identification – Intersection Approach

Q/ Who is poor?

A2/ Poor if deprived in all dimensions $c_i = d$

Dimensions					c	
$g_1^0 =$	0	0	0	0	0	Persons
	0	1	0	1	2	
	1	1	1	1	<u>4</u>	
	0	1	0	0	1	

Observations

Demanding requirement (especially if d large)

Often identifies a very narrow slice of population

Atkinson 2003 first to apply these terms.

Identification – Dual Cutoff Approach

Q/ Who is poor?

A/ Fix cutoff k , identify as poor if $c_i \geq k$

	Dimensions	c	
$\delta q_1^0 =$	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0	Persons
	$\begin{bmatrix} 0 & 1 & 0 & 1 \end{bmatrix}$	2	
	$\begin{bmatrix} 1 & 1 & 1 & 1 \end{bmatrix}$	4	
	$\begin{bmatrix} 0 & 1 & 0 & 0 \end{bmatrix}$	1	

Identification – Dual Cutoff Approach

Q/ Who is poor?

A/ Fix cutoff k , identify as poor if $c_i \geq k$ (Ex: $k = 2$)

	Dimensions	c	
$\delta_i^0 =$	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0	Persons
	$\begin{bmatrix} 0 & 1 & 0 & 1 \end{bmatrix}$	<u>2</u>	
	$\begin{bmatrix} 1 & 1 & 1 & 1 \end{bmatrix}$	<u>4</u>	
	$\begin{bmatrix} 0 & 1 & 0 & 0 \end{bmatrix}$	1	

Identification – Empirical Example

$k =$	H
Union 1	91.2%
2	75.5%
3	54.4%
4	33.3%
5	16.5%
6	6.3%
7	1.5%
8	0.2%
9	0.0%
Inters. 10	0.0%

Poverty in India for 10 dimensions

91% of population would
be targeted using union
0% using intersection

We need something in the
middle

(Alkire and Seth 2009)

Aggregation

$k = 2$

Censor data of non-poor

$$g_l^0 = \begin{array}{cc} \text{Dimensions} & c \\ \begin{bmatrix} 0 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1 \\ 1 & 1 & 1 & 1 \\ 0 & 1 & 0 & 0 \end{bmatrix} & \begin{array}{c} 0 \\ \underline{2} \\ \underline{4} \\ 1 \end{array} \end{array} \quad \text{Persons}$$

Aggregation

$k = 2$

Censored weighted deprivation matrix and censored deprivation score

$$\bar{g}^0(k) = \begin{array}{cc} \text{Dimensions} & c(k) \\ \begin{bmatrix} 0 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1 \\ 1 & 1 & 1 & 1 \\ 0 & 0 & 0 & 0 \end{bmatrix} & \begin{array}{c} 0 \\ \underline{2} \\ \underline{4} \\ 0 \end{array} \end{array} \quad \text{Persons}$$

Aggregation – Headcount Ratio

$k = 2$

Censored weighted deprivation matrix

$$\bar{g}^0(2) = \begin{array}{cc} \text{Dimensions} & c(2) \\ \begin{bmatrix} 0 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1 \\ 1 & 1 & 1 & 1 \\ 0 & 0 & 0 & 0 \end{bmatrix} & \begin{array}{c} 0 \\ \underline{2} \\ \underline{4} \\ 0 \end{array} \end{array} \quad \text{Persons}$$

Two poor persons out of four: **H = 1/2**

Critique

Suppose the number of deprivations rises for person 2

$$\bar{g}^0(2) = \begin{array}{cc} \text{Dimensions} & c(2) \\ \left[\begin{array}{cccc} 0 & 0 & 0 & 0 \\ \underline{1} & 1 & 0 & 1 \\ 1 & 1 & 1 & 1 \\ 0 & 0 & 0 & 0 \end{array} \right] & \begin{array}{c} 0 \\ \underline{3} \\ \underline{4} \\ 0 \end{array} \end{array}$$

Critique

Suppose the number of deprivations rises for person 2

$$\bar{g}^0(2) = \begin{array}{ccccc} \text{Dimensions} & c(2) \\ \left[\begin{array}{cccc} 0 & 0 & 0 & 0 \\ 1 & 1 & 0 & 1 \\ 1 & 1 & 1 & 1 \\ 0 & 0 & 0 & 0 \end{array} \right] & \begin{array}{c} 0 \\ 3 \\ 4 \\ 0 \end{array} \end{array}$$

Two poor persons out of four: **H** = 1/2

No change!

Violates 'dimensional monotonicity'

Aggregation

Return to the original censored weighted deprivation matrix

$$\bar{g}^0(2) = \begin{array}{cc} \text{Dimensions} & c(2) \\ \left[\begin{array}{cccc} 0 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1 \\ 1 & 1 & 1 & 1 \\ 0 & 0 & 0 & 0 \end{array} \right] & \begin{array}{c} 0 \\ \underline{2} \\ \underline{4} \\ 0 \end{array} \end{array} \quad \text{Persons}$$

Aggregation - Intensity

Need to augment information

Deprivation shares
among poor

	Dimensions	$c(k)$	$c(k)/d$
$\bar{g}^0(2) =$	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0	
	$\begin{bmatrix} 0 & 1 & 0 & 1 \end{bmatrix}$	<u>2</u>	2 / 4
	$\begin{bmatrix} 1 & 1 & 1 & 1 \end{bmatrix}$	<u>4</u>	4 / 4
	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0	

Aggregation - Intensity

Need to augment information

Deprivation shares
among poor

	Dimensions	$c(k)$	$c(k)/d$
$\bar{g}^0(2) =$	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0	
	$\begin{bmatrix} 0 & 1 & 0 & 1 \end{bmatrix}$	<u>2</u>	2/4
	$\begin{bmatrix} 1 & 1 & 1 & 1 \end{bmatrix}$	<u>4</u>	4/4
	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0	

A = average deprivation share among poor = 3/4

Aggregation: Adjusted Headcount Ratio

Adjusted Headcount Ratio = M_0 = HA

	Dimensions	$c(k)$	$c(k)/d$
Persons	$\bar{g}^0(2) = \begin{bmatrix} 0 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1 \\ 1 & 1 & 1 & 1 \\ 0 & 0 & 0 & 0 \end{bmatrix}$	0	
		<u>2</u>	2/4
		<u>4</u>	4/4
		0	

$$M_0 = HA = (1/2) * (3/4) = 0.375$$

Aggregation: Adjusted Headcount Ratio

$$\text{Adjusted Headcount Ratio} = M_0 = \text{HA} = \mu(\bar{g}^0(k))$$

	Dimensions	$c(k)$	$c(k)/d$
Persons	$\bar{g}^0(2) = \begin{bmatrix} 0 & 0 & 0 & 0 \\ 0 & 1 & 0 & 1 \\ 1 & 1 & 1 & 1 \\ 0 & 0 & 0 & 0 \end{bmatrix}$	0	
		<u>2</u>	2/4
		<u>4</u>	4/4
		0	

$$M_0 = \text{HA} = (1/2) * (3/4) = 0.375$$

$$M_0 = \mu(\bar{g}^0(k)) = 6/16 = 0.375$$

Aggregation: Adjusted Headcount Ratio

Suppose the number of deprivations rises for person 2

	Dimensions	$c(k)$	$c(k)/d$	
$\bar{g}^0(2) =$	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0		Persons
	$\begin{bmatrix} 1 & 1 & 0 & 1 \end{bmatrix}$	<u>3</u>	3/4	
	$\begin{bmatrix} 1 & 1 & 1 & 1 \end{bmatrix}$	<u>4</u>	4/4	
	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0		

Aggregation: Adjusted Headcount Ratio

Suppose the number of deprivations rises for person 2

	Dimensions	$c(k)$	$c(k)/d$	
$\bar{g}^0(2) =$	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0		Persons
	$\begin{bmatrix} 1 & 1 & 0 & 1 \end{bmatrix}$	3	3/4	
	$\begin{bmatrix} 1 & 1 & 1 & 1 \end{bmatrix}$	4	4/4	
	$\begin{bmatrix} 0 & 0 & 0 & 0 \end{bmatrix}$	0		

\mathbf{A} = average deprivation share among poor = 7/8

\mathbf{M}_0 changes!

$$\mathbf{M}_0 = 7/16 = 0.4375$$

Satisfies dimensional monotonicity

Methodology: Adjusted Headcount Ratio

Interpretation: conveys information on deprivations

Applicability: valid for ordinal data

Simplicity: easy to compute

Useful properties

- Subgroup decomposition
- Dimensional breakdown

Expandable: If variables are all **cardinal** can go further

Multidimensional Measurement Methods:

OXFORD
UNIVERSITY PRESS

Contents

- Chapter 1 – Introduction

Countries

This methodology can be used to design robust official statistics

Official multidimensional poverty statistics are used in Mexico, Colombia, Bhutan, Chile and others.

This book can be useful for technical advisors in countries that are exploring or actively designing multidimensional poverty measures

The [MPPN](#) (Multidimensional Poverty Peer Network) is a network of some 40 countries with such an interest.

It can also be used for designing other policy-relevant indices

Examples: Well-being, Child Poverty, Empowerment (WEAI)

National MPIs

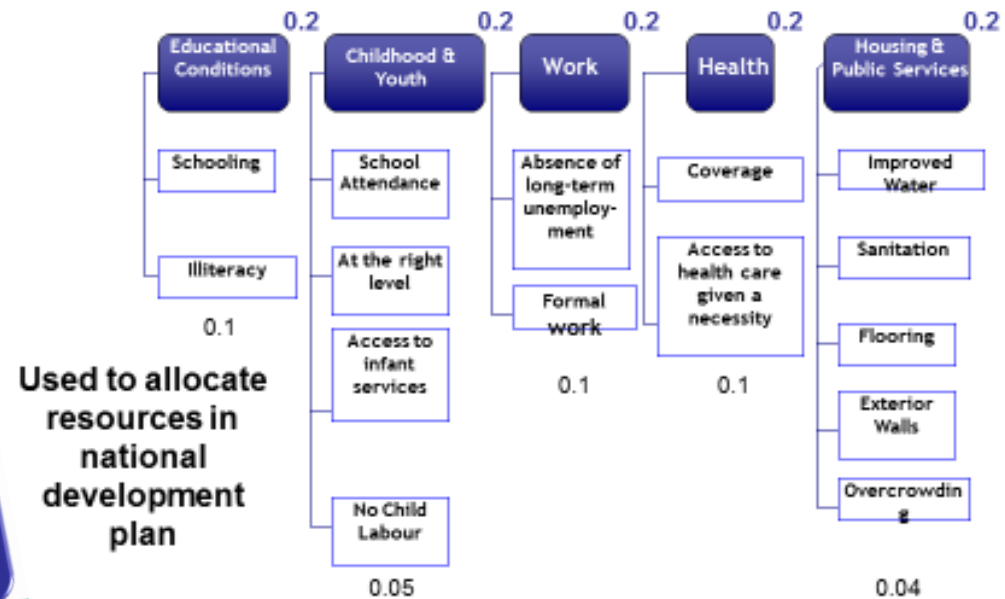

- Reflect National Priorities
- Vital for policy
- Measure to Manage ~ Target, Coordinate, M&E

The South African MPI
Creating a multidimensional poverty index using census data

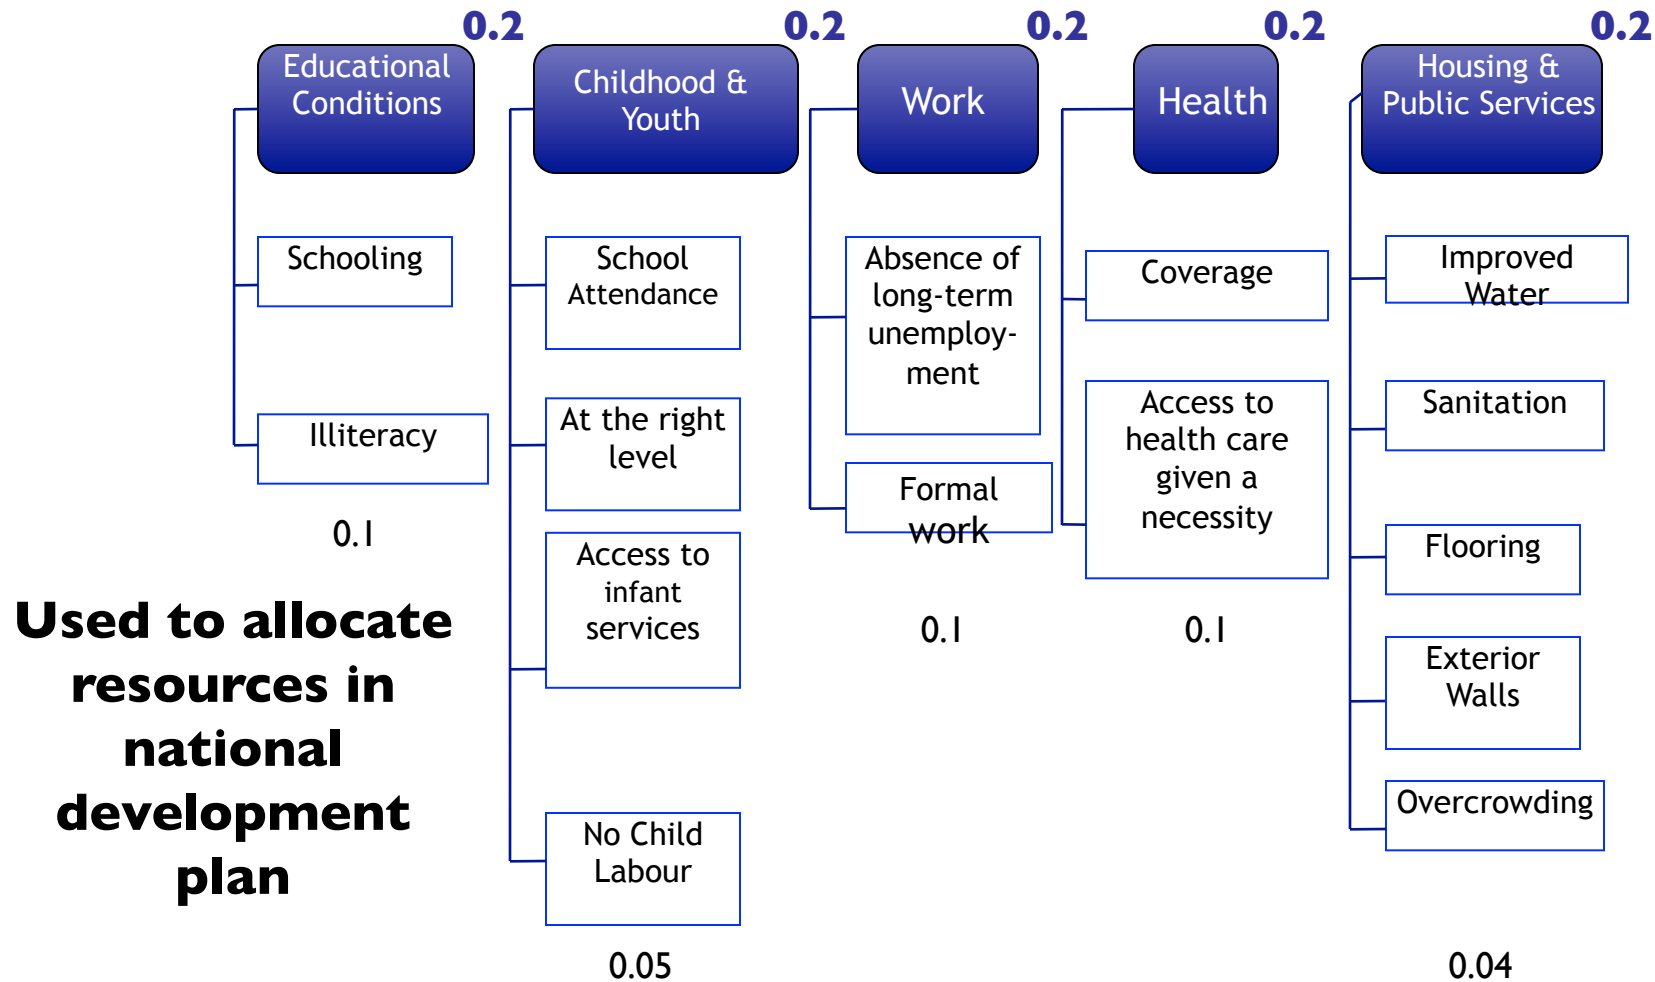

MPI-Colombia

Used to allocate
resources in
national
development
plan

MPI-Colombia

4 key aspects:

1. Reflects the objectives of social policy
2. Coordinates public policy sectors
3. Monitors public policy
4. Informs Decision-making:
 1. Geographic targeting
 2. Programme composition
 3. Graduation from CCTs

&

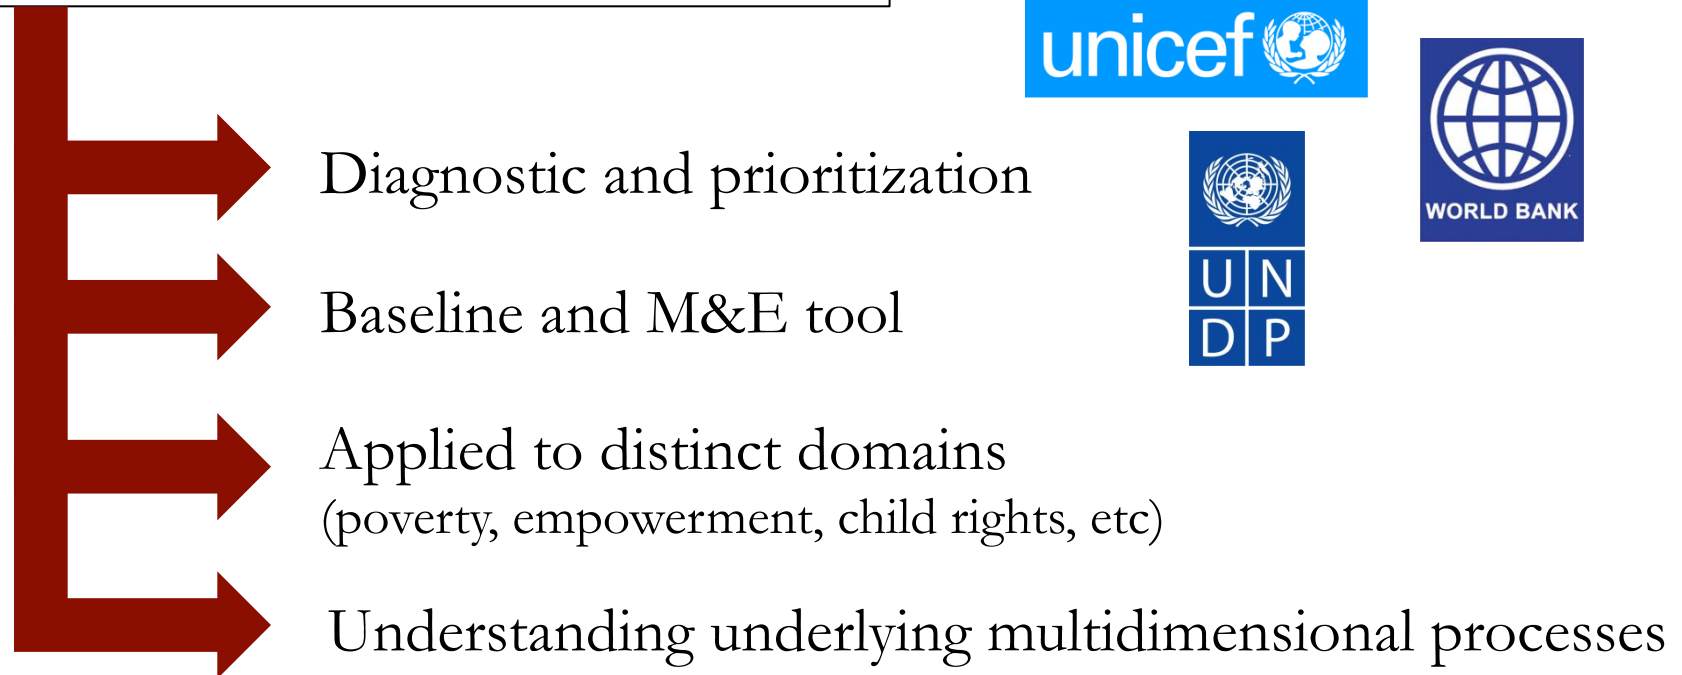

Different types of social programs depending on multidimensional poverty incidence

International Agencies & Civil Society

Use for Programme Quality
(inward looking)

Multidimensional measures force institutions to break silos,
and to discuss interaction between dimensions!

International Agencies & Civil Society

Use for Policy & Research or Advocacy
(outward looking)

Accountability tool to hold governments to account

Monitoring multidimensional outcomes
(Global MPI, UNICEF MODA, MPI & Post2015)

Policy analysis for evidence based advocacy

Teaching

Masters/PhD level courses

- ✓ Module on poverty measurement
- ✓ Comprehensive overview for teachers
- ✓ Unified notation and framework

From book website: <http://multidimensionalpoverty.org/>

- ✓ Online chapters
- ✓ Video presentations
- ✓ PowerPoints
- ✓ Paper exercises
- ✓ Stata do files for statistical exercises

Chapter 3 – Overview of Methods for Multidimensional Poverty Assessment

Overview:

This chapter presents a constructive survey of the major existing methods for measuring multidimensional poverty. Many measures were motivated by the basic needs approach, the capability approach, and the social inclusion approach among others. This chapter reviews Dashboards, the composite indices approach, Venn diagrams, the dominance approach, statistical approaches, fuzzy sets, and the axiomatic approach. The first two methods (dashboard and composite indices) methods that are implemented using aggregate data from different sources ignoring the joint distribution of deprivations. The other methods reflect the joint distribution and are implemented using data in which information on each dimension is available for each unit of analysis. After outlining each method, we provide a critical evaluation by discussing its advantages and disadvantages.

Online Training Portal

The following resources provide a thorough conceptual and technical introduction to current literature on the **capability approach** and on **techniques of measuring multidimensional poverty**. There is a strong emphasis on the Alkire-Foster method developed by OPHI and used to construct the global Multidimensional Poverty Index (MPI) and national multidimensional poverty measures in Mexico and Colombia.

- **Background to the course**
- **Who is it for?**

Videos are available for most of the sessions, which can be watched online or downloaded. Lighter, **audio-only**, files are also available, along with **lecture slides** and supporting resources such as **exercises** and **reading lists**.

Session title	Resources available			
	Video and audio	Slides	Exercises	Reading List
Background: axioms in poverty measures				
Unidimensional Poverty Measurement: Axioms, Measures, and Dominance	✓	✓	✓	✓
Why Multidimensional Poverty Measures?	✓	✓		✓

Featured

Multidimensional Poverty Measurement & Analysis is a book from OPHI (forthcoming June 2015) providing an in-depth account of multidimensional poverty comparison methodologies, with a particular focus on the Alkire-Foster Method. **E-chapters available now.**

An Introduction to the Human Development and Capability Approach ~ Freedom and Agency
OPHI supported the development of this new textbook aimed at students in the social sciences and development practitioners. It provides an introduction to Amartya Sen's human development and capability approach. **Download as a free e-textbook from IDRC.**

Researchers

Empirical research questions

Descriptive

Measures: Comparable M0 for OECD countries.

Applied measures: Health poverty, Child/elder poverty

Inferential

Assess the **transmission mechanisms** between policies and multidimensional poverty

- ‘Micro’ and ‘macro’ **regressions**;
- **Impact evaluation** analyses

Researchers

Methodological research questions

Measurement

Axioms - distributional analysis

Standards for robustness analyses

Data analysis

Treatment of missing values

Treatment of panel data and **demographics** (dynamic analysis of poverty)
